Dade. 1614.

A

Prognostication:

In which you may behold the state of this
yeare of our Lord

God. 1614.

Being the second after the
Leape yeare.

Made and set forth by *Iohn*

Dade Gentleman, practitioner
in Physicke.

Imprinted at London for
the Companie of Stationers.

1614.

A necessarie and perfecte Rule, to know the beginning and ending of every Tearme, with their Returnes.

Whilſt Tearme beginneth the xxiij. day of Januarie, and
endeth the xii. of February; which Tearme hath foure Re-
turnes. viz.

1. Octabis Hillarie. } 3. Crasti. purifica.
2. Quind. Hillarie. } 4. Octabis Purifica.

Easter Tearme beginneth the xi. day of May, and endeth the
vi. day of June, and hath five Returnes: that is to say,

1. Quind. Pasche. } 3. Menſe Pasche. } 4. Quinq; Pasche.
2. Tres Pasche. } 5. Crasti. Alcenſion.

Trinitie Tearme beginneth on the xxiij. of June: and endeth
the xxiij. of July: And hath foure Returnes; that is to say,

1. Craston. Trinitatis. } 3. Quind. Trinitatis.
2. Octabis Trinitatis. } 4. Tres Trinitatis.

Michaſmas Tearme beginneth the i. day of October, and
endeth the xxiij. of November: and hath eight Returnes. viz.

1. Octabis Michael. } 5. Crasti. Animarum.
2. Quind. Michael. } 6. Crastino Martini.
3. Tres Michael. } 7. Octabis Martini.
4. Menſe Michael, } 8. Quind Martini.

Note also, that the Treſquier openeth eight dayes before
any Tearme begin (except Trinitie Tearme;) in which it openeth
but foure dayes before.

A Description of the

four Quarters of the yeare:

And first of Winter quarter.

Solin lib. 2. c. 6.

THE Winter quarter (after the Astronomers opinion) began the xij. day of December 1613. and doth continue till the x. day of March; so that the first part of Winter Astronomically, is in the later end of one yeare, and in the beginning of the other: at which time, is the shortest day in the yeare, by reason of the Sunnes greatest declination from the Equinoctial, Southwards.

The qualitie of this Season, is knowne to be cold and moist; contrarie to the nature of the Sommer: and usually in this Quarter, the inward partes of mens bodies are very hotte; and being most in healeth, may digest plenty of foode, because the chiefe and naturall heate is vponen into the inward partes of the body, which doth greatly comfort and strengthen those partes.

A Prognostication.

The disposition of the Weather is set downe
heere after, for every day through-out the whole
Quarter.

The Griefes which participate with this
Quarter, where with many shall be grieved sorely;
yea, some vnto the death, are these, and the like; as
Rheumes, falling sicknesse, Soundings, Paines
in the Stomacke, Laskes, Coughes, Headach,
with Sicknesse proceeding of rotten and corrupt
Humors: with diuers other soyes of infirmities
incident both to men, women, and children.

Of the second part of the yeare,
called, the Spring.

Sol in γ. δ. II.

The Winter Quarter being ended, and the
Sunne forsaking the cold and watry signe Pis-
ces, and entering into the first degree of Aries, (that
Equinoctiall signe,) beginneth the Spring, on the
tenth day of March, the dayes and nightes being
equall: and continueth till the xi. of June.

This Quarter of his owne naturall disposition,
is hot and moist, very temperate and healthfull;

for

for it is accounted the best time in the yeere to giue
ease vnto diseased bodyes, and to restore health a-
gaine to such as in whom it hath been decayed, by
any accidentall or naturall meanes.

The Condition of the Weather for this Quar-
ter, is shewne in the dayly disposition of this sea-
son.

The Diseases incident to this Quarter, are
Itch, Scabbies, smill poore, pestilent Agues,
Plurisies, Dropisies, paine in the Head, Eyes, and
Stomacke, Madnes, Melancholy, Bleeding at
the Nose, Apoplexies, and the Goutte: with other
strange and new Diseases.

Of the third part of this yeare, called Sommer.

Sol in ♄ ♏ m.

The third Astronomical Quarter of the yeare,
called the Sommer, taketh his beginning when
the Sunne entreteth into the first degree of Cancer;
at which time, the Sunne beginneth to decline
from the Northerne Pole, towards the Equi-
noctiall line, the dayes beginning to decrease and

B 3.

ware

A Prognostication.

ware shorter, and the nights to lengthen : This Quarter taketh his beginning on the xi. day of June, (according to the Astronomers accompt,) and continueth till the xij. day of September following.

The ordinarie qualities of this Season, according to his proper nature, is heate and drynesse; which spreadeth it selfe throughout all the parties of the body of man.

As for the disposition of the Weather for this Season, you may see it in the dayly inclination.

The Sickneses of this time, are diuers; and many, threatned to people of all ages and sexes; as namely, Burning Agues, Pestilence, Frenches, Plurisies, hotte Impostumes, paine in the head, with diuers Inflammations, and dangerous Infirmities, proceeding especially of Cholericke humours; which threatneth to bereaue many of their mortall liues.

Of the fourth part of this year,
called *Autumne*.

Sol in π . m. 7.

A Vtturne, or the Fall of the Lease, euermore taketh his beginning at that time, when the
Sunne

Dade. 1614.

Sunne hath left the last scruple of Virgo, and entereth into the first degree of the seconds Equinoctiall signe Libra, being on the ris. day of September: and this Quarter doth continue till the ris. day December: which is when the Sunne shall enter into Capricorne.

The nature of this Season, is cold and dry; yet it is evermore inclined to be variable and unconstant, by meanes whereof, great store of Sickneses are increased, it being the most unhollome quarter in the yeare.

The Infirmities of this Quarter are diuers, and dangerous, threatned to all sortes of people, as well the rich as the poore: as namely, Trampes, Costuenesse, flures of blood, paine in the sides, Falling sicknesse, Shortnesse of breath, Plancholie, Tympanies, the Emerods, Dropsies, Scitica, and Collickes; with diuers other most grievous: God of his mercie, keepe vs from them.

A briefe

A Prognostication.

A briefe Description how the seauen Planets are placed about the Earth in the Skie, or vnder the Earth, for euery Month after Sunne setting; by which you may perceiue how they keepe their motion night and day all the yeare. Moreouer, the good dayes of Sympathy touching mans complexion and body, in causes of administration of Physicke, or such like: And also, the Euill dayes (according to the malevolent aspectes of the Planets) in which it is dangerous to let blood, take vomits, purgations, sweates, or such like attempts.

Of Ianuarie.

Saturne and Venus are Southcast when the Sunne riseth.

Jupiter is in the South when the Sunne setteth.

Mars is in the East when the Sunne doth set.

Mercury goeth betwixt with the Sunne.

The first, second, thirti, and fourth dayes, fayre.

The v. and vi. dayes, some stormes.

First Quarter on Friday the vii. day, halfe an houre after vi. of the clocke at night.

The vii. viii. ix. x. and xi. dayes, frostes.

The xii. xiii. and xiiii. dayes, hoze of snowes.

Full Moone on Saturday the xv. day, 25. minutes after vii. of the clocke at night.

The xv. xvi. xvii. xix. and xx. dayes, very cold & hard weather.

The xxi. and xxii. dayes, wet weather.

Last Quarter on Saturday the xxii. day 12. minutes after vii. of the clocke at night.

The xxii. xxiii. and xxv. dayes, frosty and cold.

The xxvi. xxvii. and xxviii. dayes, windes, and shoets.

New Moone on Saturday the xxix. day, 50. min. after vi. of the clocke at night.

The xxx. xxxi. and xxxii. dayes, some stormes of raine.
